

Suwicha Wannawichian, Asst. Prof. (PhD)

Department of Physics and Materials

Faculty of Science, Chiang Mai University

239 Huaykaew Road, T. Suthep, Mueng District, Chiang Mai
50200 THAILAND

Tel: 668-610-54204

Email: suwicha.w@cmu.ac.th, suwichawan@gmail.com

Education B.S., Physics, Chiangmai University, 1998

M.A., Physics, Chulalongkorn University, 2001

Ph.D., Astronomy, Boston University, 2011

PhD Dissertation: Auroral Emissions and Electromagnetic Interactions between Giant Planets and Their Satellites Adviser: Prof. John T. Clarke

Appointments

- | | |
|-------------|----------------------------------------------------------------------------------------------------------------|
| 2003 – 2009 | Graduate Student Research Assistant in Astronomy at Boston University

Adviser: Prof. John T. Clarke |
| 2007 – 2008 | Graduate Student Teaching Fellowship in Astronomy at Boston University |
| 2001 – 2002 | Graduate Student Research Assistant in Physics at Chulalongkorn University

Adviser: Prof. David Ruffolo |

Wannawichian S. and T. Promfu, *Temporal variations of Io's magnetic footprint brightness*, 12th Asia-Pacific Regional IAU Meeting (APRIM), August 18-22, 2014 CDD, Daejeon, South KOREA

Wannawichian S., W. Krittinatham and J. T. Clarke, *Electrodynamic interaction at Io as the initial parameter of auroral footprint emission at Jupiter*, Siam Physics Congress: SPC2013, March 21-23, 2013, Chiang Mai Grand View Hotel, Chiang Mai, Thailand

Sitarachu K. and **S. Wannawichian**, *Longitudinal variation of expected highest plasma density in Jupiter's magnetosphere based on the observations of Io's magnetic footprint emissions*, The Southeast Asian Young Astronomers Collaboration (SEAYAC), November 2-5, 2012, the Legend Hotel, Puerto Princesa City, Palawan, Philippines

Awards and Honors

1994 – 2005 Scholarship from the Royal Thai Government

Society Memberships

Student Member of the American Geophysical Union (AGU)
Greater Boston Organization of Thai Students and Scholars (GBOTS)

Research Interest: Connection to research in Antarctica

Influential factors on Jupiter's and Earth's auroral variability

Aurora on Jupiter behaves with variation different from those on Earth. The difference is a result of intense magnetic field at Jupiter, which is approximately 4 times stronger than Earth's magnetic field. In addition, the generated energy of magnetospheric plasma is much more immense due to Jupiter's 9.92 hours rotation period, which is much faster than Earth's rotation, 24 hours. Magnetic field strength and rotation period are the main parameters controlling planets' magnetospheric boundary and ability to withstand the influence of solar wind's dynamic pressure. At Jupiter, the magnetosphere extends to larger distance in comparison with Earth's magnetosphere. Comparing with Earth's aurora, Jupiter's aurora is approximately 100 times brighter and more independent to solar wind condition.

The understanding about influential factors of auroral variabilities on Earth and Jupiter will play an important role in revealing of magnetohydrodynamics interactions inside planets.
