PURPOSE OF THIS PROJECT

we pursue techniques to determine the spectrum index of Galactic Cosmic Rays (GCRs) using a data from a Changvan detector, avoiding the systematic uncertainties of cross-station comparisons.

COSMIC RAYS

Earth's Atmosphere

Primary cosmic rays

Incoming Cosmic Ray

Secondary cosmic rays

We measure the neutrons!

KEY

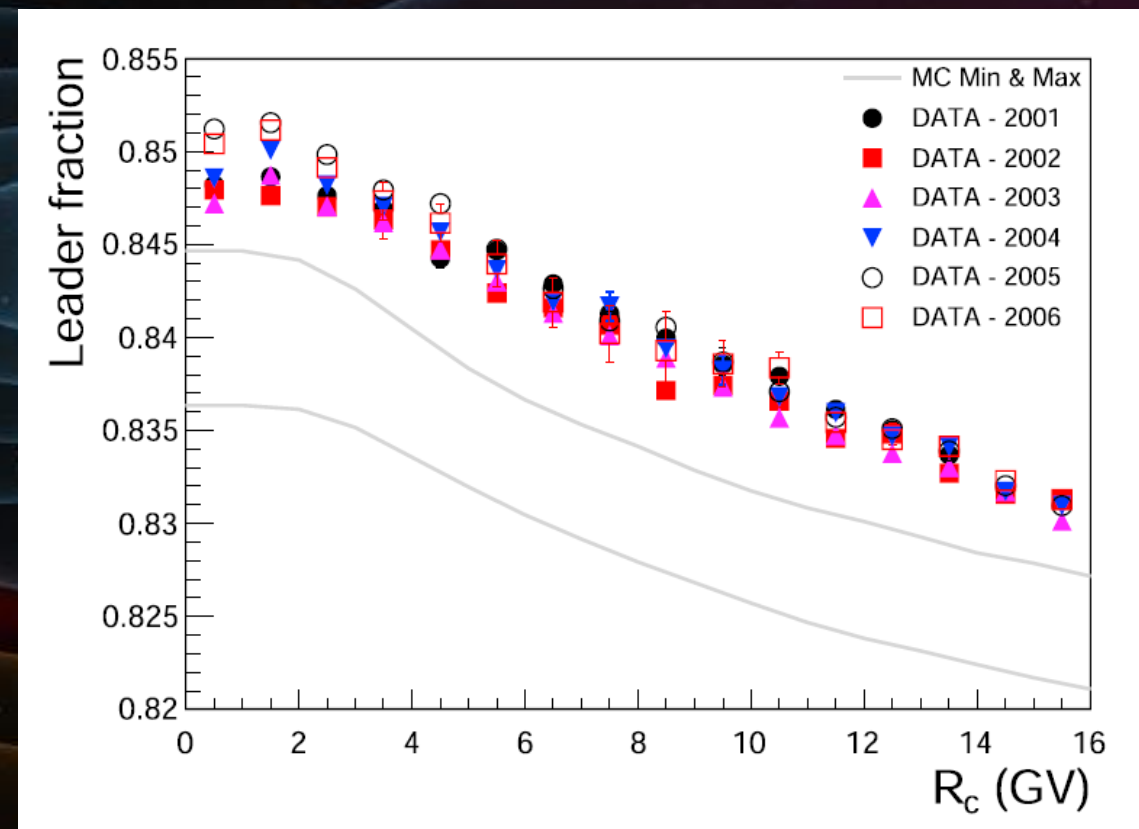

P	Proton	e	Electron
n	Neutron	μ	Muon
π	Pion	γ	Photon

GALACTIC COSMIC RAY FLUX

Distribution of cosmic-ray flux as a function of particle energy.

Dependence of the leader fraction L measured by the mobile neutron monitor on the apparent cutoff rigidity R_c for the six surveys.

SOLAR MODULATION

TIME-DELAY HISTOGRAMS

- The time delay refers to the time interval between successive neutron detections in one counter.
- (left) Long time delays show the exponential distribution typical of unrelated events.
- (right) The short time histogram, which is actually a zoom in the long time histogram, shows the nonexponential excess at short time delays that can be attributed to the time delays between neutrons produced in the same secondary particle interaction in the lead. The electronic dead time is typically $t_d \sim 86.80 \mu\text{s}$.

LEADER FRACTION

The leader fraction (L), defined as neutron counts that do not follow a previous neutron count in the same counter from the same atmospheric secondary particle

We fitted to the function $N(t) = Ae^{-\alpha t}$, shown in red, from 5 ms to the next to last time bin (excluding the overflow time bin).

$$L = \frac{\int_{t_d}^{\infty} A_0 e^{-\alpha t} \cdot dt}{\int_{t_d}^{t_o} N_t \cdot dt + \int_{t_o}^{\infty} A_0 e^{-\alpha t} \cdot dt}$$

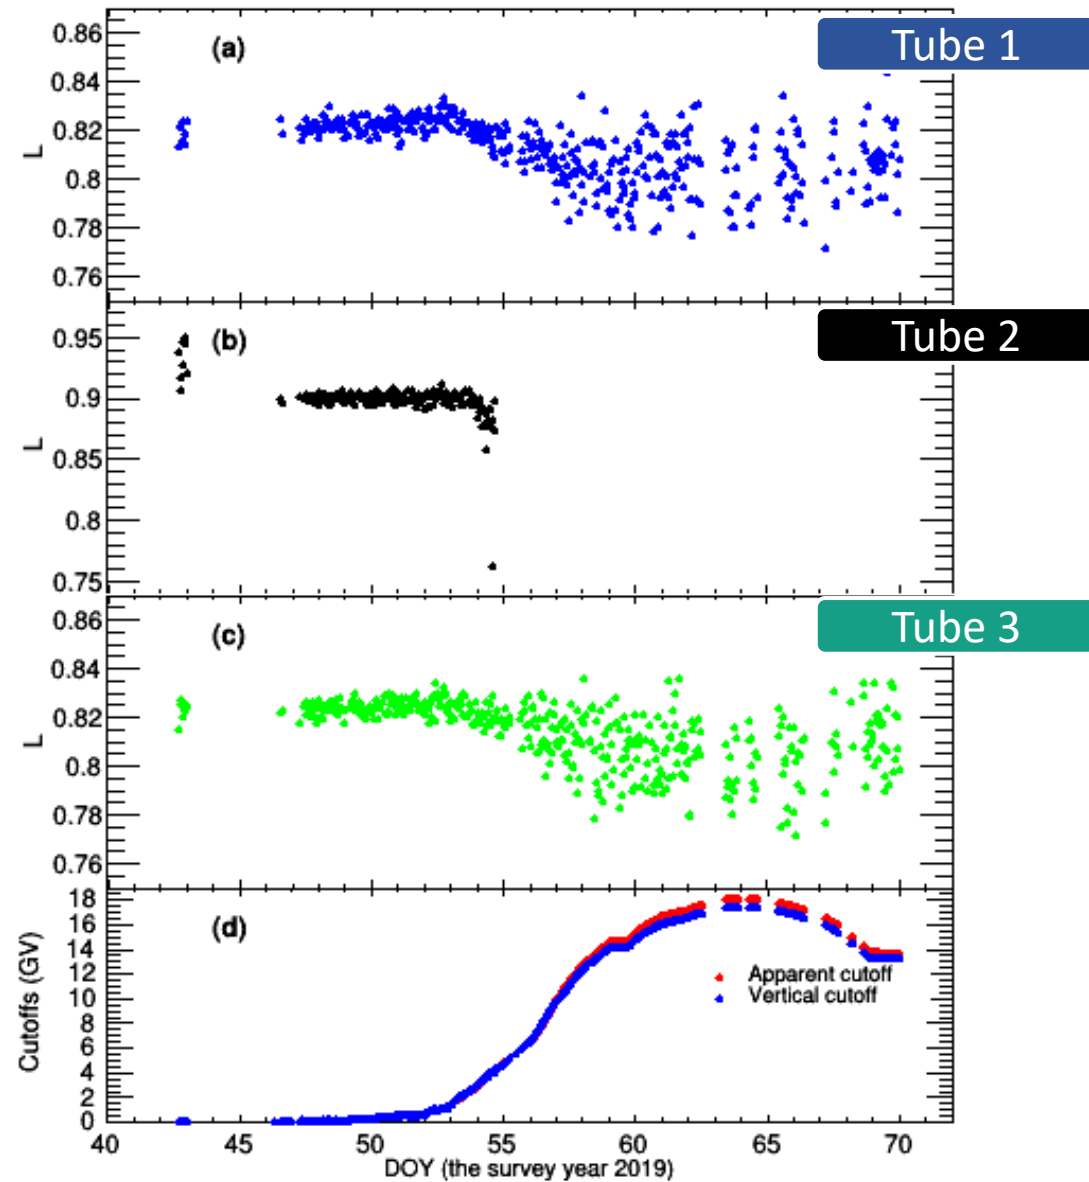

or for the discrete histogram,

$$L = \frac{\frac{A_0}{\alpha} e^{-\alpha t_d}}{\sum_{t=t_d}^{t_o} N_t + \frac{A_0}{\alpha} e^{-\alpha t_o}}$$

A hand-drawn world map with a grid of latitude and longitude lines. The map is colored in shades of green and yellow. A dashed black line traces a path around the globe, starting from the top, going down the left side, across the bottom, and up the right side. A small black airplane icon is flying in the upper left quadrant of the map. In the center of the map, there is a teal rectangular box containing the title text.

The results from Changvan Latitude Survey

Leader fraction of the survey year 2019 (CHINARE35)

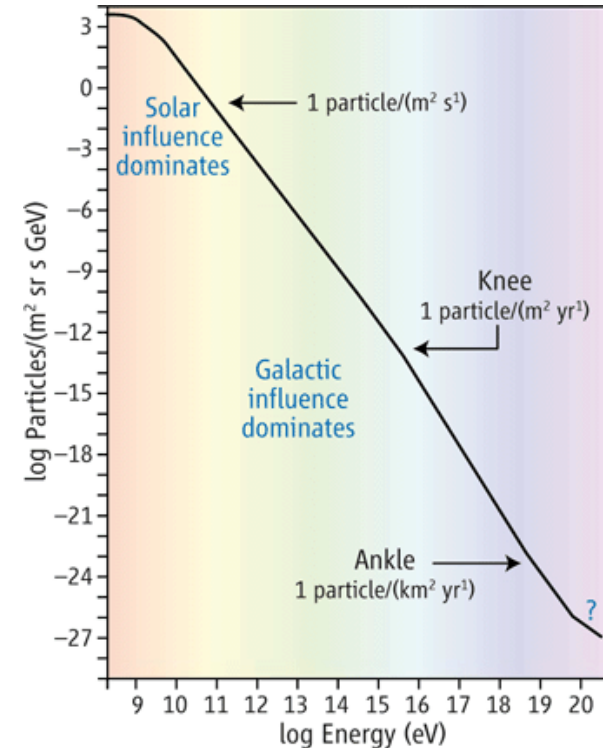

Leader fraction of the survey year 2019-2020 (CHINARE36)

NEXT STEP

Analyzed the data from cross-tubes time delay histograms of Changvan neutron monitor to find the **leader fraction of cross tubes** to get closer to indicate the cosmic ray spectral index

Cosmic-ray spectrum.
Distribution of cosmic-ray flux as a function of particle energy.
